IRONING EQUIPMENT

## Air-operated press with collar & cuffs boards, with upper polished buck, with or without boiler, vacuum unit and compressor

Stirmatic automatic presses are easily operated thanks to their pneumatic systems. They feature new higher power pressing, fully adjustable, and a variety of bucks for specialist applications. The wide opening bucks, facilitate both the pressing operation and the use of the steam iron. Operation of the press head may be controlled by pedals (**AP version**), in order to leave the operator's hands free. In this case, to ensure operator safety, a safe-hands protection frame is fitted to the press head.

Alternatively, the head of the press may be controlled by two buttons (**AB version**), which have to be pushed simultaneously. The presses are available either completely self contained with built-in electric and automatic steam boiler, vacuum and compressor unit as required, or for central supplies operation.

### AB version

- Lowering of the press head controlled by two push buttons

### AP version

- Lowering of the press head controlled by one pedal, complete with safety frame
