Turbo cooling function. Specific cycles for ice cream. Evaporator with antirust protection. Digital temperature and time display. HACCP and Service alarms with data logging. Operating air temperature: +90 -41°C. For ambient temperatures up to 32°C. Cyclopentane insulation (HCFC, CFC and HFC free). R404a refrigerant gas (HCFC and CFC free).

#### **Main Features**

- Blast Freezing cycle: 50 kg from 90°C up to -18°C in less than four hours.
- Blast Chilling cycle: 50 kg from +90°C up to + 3°C in less than 90 minutes.
- Soft Chilling (air temperature 0°C).
- Hard Chilling (air temperature -20°C).
- Shock freezing (low air temperature adjustable up to -41°C).
- Holding at +3 °C for chilling or -22 °C for freezing, automatically activated at the end of each cycle, to save energy and maintain the target temperature (manual activation is also possible).
- Turbo cooling: chiller works continuously at the desired temperature; ideal for continuous production.
- Cruise cycle: the chiller automatically sets the parameters for the quickes and best chilling (it works by probe).
- Two specialized cycles:
- P1 brings down ice-cream temperature to -14°C (measured at the core when probe is inserted). Once set temperature is reached, the temporary maintenance phase automatically begins, holding the -14°C temperature.
- P2 sets temperature to -36°C / -40°C for an indefinite amount of time, maintaining the ventilation active. Temperature is adjustable up to -40°C without interrupting the cycle, allowing ice-cream to be kept longer in the freezer.
- Control unit provides several operating settings (programmable parameters): time/core temperature according to NF and UK regulations, time/air temperature/probe personalized according to national regulations, sterilizing cycle: UV lamps built-in (on request), 3 single sensor or 3-sensor temperature probes (as accessory), ideal for meats, automatic defrosting and manual defrostina.
- 3-sensor core probe as standard and automatic detection of the core probe insertion.
- Probe-driven cycles feature ARTE (Algorithm for Remaining Time Estimation) to make planning the activities easier.
- Control unit provides two large displays to read out: time, core temperature, cycle countdown, alarms, service information.
- Audible alarm starts when the cycle ends or terminates abnormally.
- All information related to the different operating models are recorded: date, time, cycle, core temperature, holding temperature, HACCP accordance.
- Multi-purpose internal structure is suitable for 10 grids GN 1/1 (36 positions available with 20 mm pitch) 10 grids or trays 600 x 400 mm (36 positions availabe with 20 mm pitch) or 18 ice-cream basins of 5 kg each (h 125 x 165 x 360).
- USB connection: to download HACCP data from the blast chiller (time, cavity temperature, alarms, and probe temperature).
- Performance guaranteed at ambient temperatures of +32°C.
